Description
Since Tiki10 the Tiki SMARTY Plugin, using the 'eval' option to simply display a smarty variable, no longer works because the underpinning smarty function.eval.php is no longer part of the Tiki distribution - the SMARTY Plugin code checks for the availability of function.eval.php in either lib/smarty/libs/plugins/ or the lib/smarty_tiki/ folders and gives an error message "Incorrect parameter" if it is not found. Its removal is probably due to the move Smarty 3 but it is not clear whether there is Smarty 3 version of eval available. The Tiki 9 version of function.eval.php does not work in 10/11/trunk (gives fatal errors) so this doesn't give us a 'quick fix'.

Solution needed to be able to 'eval' and display any smarty variable type not just strings

Solution
I had fixed this issue.

Please check this commit id: 48352

fixed - thanks

Tiki 9.x has Smarty 3.1:
http://doc.tiki.org/Tiki9#Smarty_updated_to_3.1

And 3.2 is not out yet, so we are still using 3.1

But there could have been changes between 3.1.x and 3.1.y
https://sourceforge.net/p/tikiwiki/code/44678

Check the changelog:
https://code.google.com/p/smarty-php/source/browse/trunk/distribution/change_log.txt

I suggest: How to figure out what revision number causes a bug

Best regards,

M ;-)

Now in Tiki there are a lot of {eval} still seem to work in the templates. I think this bug refer only to the SMARTY wiki-plugin. http://doc.tiki.org/pluginsmarty, so I think the fix might be to use $output = $smarty->fetch("eval:$string"); instead of calling the old way. see http://www.smarty.net/forums/viewtopic.php?p=84745
