Description

I can't delete a file gallery. I check the box and then 'with selected, red X'. When I click the red x, it asks me if I'm sure I want to proceed. I say 'yes' and the page reloads but no change is made.

How this gallery was created:

I created the main gallery as admin and was playing with permissions as a regular logged in user. I found I could not 'create' a new gallery, but tiki DID allow me to duplicate an existing one with the same permissions, etc. Which seems like a bug by itself but I digress. I created the duplicate gallery with my generic user but now the admin user can't delete it.

Solution

Double check that admin can delete any file gallery.

Workaround

I gave my generic user delete permissions and used that account to delete the gallery.
