Description

Set a tracker to display items with a wiki page template.
Don't create the template so it is missing.

When viewing a tracker items popup this (ugly) error.

```
Fatal error: Uncaught exception 'SmartyException' with message 'Unable to load template file
'promo_tpl' in 'tracker_pretty_item.tpl' in

```
Smarty_Internal_TemplateBase->fetch()  
/var/www/sites/xxx/xxx/subdomains/www/html/lib/init/smarty.php:254
```

Should display the item with the tracker standard view (no template).
Eventually display a small error to admin only.

Solution

Resolved r46564.

Could not proceed with normal display. The error occurs during rendering and some artifacts remain visible, leading to a broken display.

Redirecting to the item list with a notice. This should not happen under normal use as it is a misconfiguration.

I get just *Missing wiki template page "foo"* for wiki syntax: Missing or incorrect trackerId parameter for the plugin.
