CODE plugin doesn't accept HTML Code | Tiki Wiki CMS Groupware :: Development

CODE plugin doesn't accept HTML Code

### Status

● Open

### Subject

CODE plugin doesn't accept HTML Code

### Version

12.x

### Category

- Usability

### Feature

Wiki Plugin (extends basic syntax)

### Resolution status

Confirmed

### Submitted by

Pascal St-Jean

### Lastmod by

Pascal St-Jean

### Rating

★★★★★ (0) ?

### Description

Adding any type of code such as PHP or SMARTY saves fine but adding actual HTML code inside the CODE plugin generates some funky results.

This means that it would be impossible to create a wiki page that demonstrates on to write HTML.

Comments

Xavi (as xavidp - admin) 07 Aug 13 05:42 GMT-0000

R syntax uses

`a < - "foo"`

(without the space between `<` and `-`, and the whole line surrounded by `CODE` tags)

but that is cut by tiki and nothing else is displayed after that

Xavi (as xavidp - admin) 07 Aug 13 05:44 GMT-0000

and this can be seen reproduced in the forum about tiki and pluginR in t.o

Philippe Cloutier 10 Jan 18 15:43 GMT-0000

I do not see an issue in trunk r65146 and the show instance is broken. Please provide an example body which is problematic.
