Description
Categories are amazing for a large site. It makes it easier to manage. Next step is to add an option in search which can be filtered by category.

See attached searchlib.php. Use pass additional $cs parameter (which is an array of categories to search within) into function find... in searchlib which passes $cs into function _find, which then blocks items not in $cs from being shown.

seromine 16 Jul 08 00:20 GMT-0000

This is exactly what I have been looking for....but it didnt appear to work, and it might be because it is outdated. I work at a library, we are using tikiwiki, and I am in desperate need of a better category search tool.

Any possibility you might be able to update a current searchlib.php (maybe 1.10 version?) to include to search within a category!
