Description
        Say I have a tab open to editing page X, and then I close tab X.
        the editor does not register that I closed the edit session, so when another user comes along to edit
        the page, they get a notification that the page is currently being edited, even though its not.

        Not sure if this persists, or eventually times out or something, but figured I'd dump the behavior. I'll
        update if I find out more.

From what I kmow, this is related to the SESSION which is controled by the browser. Most browsers store Sessions at the Process level and therefore most browsers consider the Process to be the entire Browser and not the specific tab.

http://stackoverflow.com/questions/805895/why-doesnt-closing-a-tab-delete-a-session-cookie

This will most likely change over time as modern browsers such as Chrome are starting a new process for each tab.
