Description

There are issues at: [Unified Index with MySQL Full Text Search](#)

Also, there should be warnings when site hits limitations of MySQL, that the admin needs to change to Zend_Lucene or ElasticSearch. Ideally, these warnings would come before hitting the limitations but this may not be easy to do.

Nelson (note to self): To make this bug actionable: these are the following actions. Many other things like excluding plugins by default are already done.

1) Make the logging use a different log file when triggered from the console vs the web (this will avoid any file perm problem).

2) Provide remarks box about including plugins in the admin panel.

3) Provide remarks box explaining that MySQL Full text search will only search first x characters of content (might affect large files in the file gallery for e.g.) - this is handled in item4641 already

Only thing left with this is to make the indexing use a different logfile when indexing from the web vs the console.

Nelson Ko 16 Nov 13 19:24 GMT-0000

ok, search logging now users different file for command line vs web (to avoid file perms issues)

Pascal St-Jean 17 Nov 13 00:56 GMT-0000

Nelson,

PHP Lucene is still the default index. Too much configuration needed to get it to work well. The goal was to make MySQL index the default

thanks

Nelson Ko 17 Nov 13 03:07 GMT-0000

default changed in r48488

Marc Laporte 17 Nov 13 04:43 GMT-0000

This is faster !

Pascal St-Jean 17 Nov 13 22:12 GMT-0000

this is a great first step into getting indexing default in tiki 13
