Description

Often times there are bugs that are never closed even though an actual fix has been applied. There is also the strong times where a fix was done that actually solves a bug that is in the tracker even though the developer might not have known it was there.

It would be great to have a way (maybe using NLP in Tiki 12) to have a dashboard of all the SVN commits, when you click on it, it would give a list of possible related bugs that are still open. This would allow the WishList team to clean up the old bugs and also make it easy for Developers to perform this check when committing fixes.
