Description

The installer used to be l10n ready. That is, you select a language in the first step, and all the other steps would display the strings in your desired language (provided they are translated in the corresponding language.php, etc).

Current trunk loses the language choice in the step: 'Configure General Settings', and the information is all shown again in English, even if the strings are translated in language.php.

--

Fixed, thanks Manni for checking!

Solution

I checked by installing 12.x with specified language "French" and all further steps are done in language french only.Issue is not existing.Please check the screen shots.

The screenshot shows the Tiki groupware installation process through five steps:

- Verifier les pré-requis système**: Checks system requirements, noting a warning about PHP memory limit.
- Configuration de la connexion à la base de données**: Configures database connection, selecting MySQL as the storage engine.
- Installation**: General installation steps, including choosing the MySQL storage engine.
- Vérifier l'installation**: Checks the installation, reporting success.
- Accéder à votre Tiki**: Final step to log in to the Tiki instance.
