Description

When i do an upgrade from a version to another (here from 11 to 12 svn) the "Configure General Settings" page of tiki-install.php show me normally the previous browser title.

During my last install Revision: 47521 it shows "My Tiki" (default) like it was a brand new install.

I check in the db and the value for browser title exist and therefor i shouldn't see "My Tiki".

As you can see on the screenshot seams it is only this value that is wrong as the admin email is displayed properly.

Sender address seams also deleted.

I changed the importance to high as it change and delete previous preferences data.

It is important to check this is limited to a few fields as this is destroying user/admin data !

Solution

In 11.x I gave Browsertitle as "My title" and I upgraded my tiki from version 11.x to 12.x. after upgrading also the Browsertitle remains the same as "My title".

Please check this screenshots.
