★★★★★★★☆☆ (1) ⓘ

### Related-to

- ● Site timezone is not respected when using Plugin Convene (time stored as 2 hours before my selection)
- ✖ PluginConvene: tell user chosen date and time once it is chosen
- ● Tiki Calendar add possibility to pick a time zone (especially UTC) so daylight saving time (DST) is well handled.

### Description

Tested on <https://dev.tiki.org>

Israel is now UTC+3

I entered 22h for meeting time.

Linux timestamp is correct : 1381518000 = Your time zone: 11 October 2013 22:00:00 GMT+3

However the plugin show me (my user pref are : Asia/Jerusalem UTC+2) on the page : 11 Oct. 13 21:00 IST (not so long ago it show IDT).

Seems Tiki, or the plugin are trying to tell me that Israel is UTC+2 and that is wrong.

If I switch my user preference to *Site Default*, it shows : 11 Oct. 13 21:00 CEST.

if i switch to *London UTC+0*, it shows : 11 Oct. 13 20:00 BST

Addition: I added date to convene i created yesterday. Some show IDT some show IST.

They should show the same.

I check the linux timestamp they all are 22:00 (GMT+3) but they show 21:00 on the tiki page.

## Workaround

A workaround is described at [How to organize an online meeting](#) and consists on relying on [timeanddate.com](#)

Ex.:

<http://www.timeanddate.com/worldclock/fixedtime.html?iso=20131002T1800>

This is not a proper workaround for a Tiki bug.

It is the "don't use the plugin" solution (good to solve meeting problem, not to solve the plugin problem).

## Comments

Jonny Bradley 19 Oct 13 16:46 GMT-0000

I have tested the same convene dates now on another couple of servers and this doesn't happen elsewhere, e.g. [here](#):

- <http://demo.tiki.org/12x/convene+test>

So looks like an artefact here only (if you set your userpref timezone to Asia/Jerusalem).

Most odd, but don't think it can be fixed within Tiki. Unless you can recreate on a show instance maybe?

Pascal St-Jean 20 Oct 13 18:28 GMT-0000

If we can reproduce on show then it can be determined that it is not a server related issue.

thanks

Xavier de Pedro 14 Aug 14 09:52 GMT-0000

I tried with trunk and it works as expected on show.t.o

(<http://xavi-9794-5425.show.tikiwiki.org/tiki-index.php?page=HomePage>) , but reproduced in t.o community site (<http://dev.tiki.org/item5425> - <https://tiki.org/Admins+Team+Meetings>)

So maybe there is some interference with some timezone param set in php.ini (or elsewhere), and not just in Tiki?
