Description

When using ElFinder as the gallery viewer, browsing for images does not work. ElFinder returns the img plugin syntax instead of the image URL.

The show instance does not work too well. So, I made a screencast
{flash type="url" movie="display437" width="759" height="753"}

Adding CkEditor image toolbar button to show, too.

Note: This is when using HTML WYSIWYG and the CKEditor Image tool, but will have a go

Seems that now you just get the fileId in the URL box, so something's changed here. I think the old filegal manager used to do this ok so the code must be in there somewhere... will look
