Description

SORRY for frequent Bug Tracker infomails - something weird is going on on this server/website or tracker.

Tiki version: Last update from SVN (12.0svn): Monday 28 October, 2013 18:41:51 CET - REV 48198 (MyISAM)

Category: "Bug Regression" / Version "Tiki 12" Features: "Tracker, Category, TIM/show.t.o"

=> This time it saved Category "Bug Regression" - so I try again

~~I keep the status "open" for a moment, as the buggy behaviour just partly disappeared magically.~~

Buggy behaviour appears and disappears here on item4829 and stays on item4828 - two same tracker items and different behaviour on both??? - maybe somebody works on the server and there are no real bugs? WEIRD! I will recheck tomorrow and ask in the dev-list.

~~When I create a bug report, categories "Category, Version and Feature" are not saved.~~

Update: Now categories are saved (here in item4829, not yet in item4828), but when re-editing the

tracker item, the category fields are empty

Update 2: categories stay saved in item4829, stay disappearing in item4828

Error Messages after saving/uploading:

Saving a tracker item leads to a colored table with a lot of error messages like: Fatal error: Call to a member function setSubject() on a non-object in

/var/local/dev.tiki.org/www/lib/webmail/tikimaillib.php on line 71

Update: saving goes well now (I did nothing different) — another magical self repair?

Update 2: see the different error messages in the attachment - I have no clue whats going on.

Database errors, scripts missing or not loading, errors appearing and disappearing without means ...

Show Instances:

When I create a show instance, the installation via TIM fails.

Update: the installation of 12.0alpha fails - the installation of 12.x works well.

Cannot show 12.0alpha, because show fails. Sucks.

Here the log of a failed installation of a Tiki12.0alpha show.t.o instance:

```

Comments

Nelson Ko 31 Oct 13 17:28 GMT-0000

This was caused by non user name entered into the "Volunteered to solve" field. Jonny is looking at some validation of the field before saving. It is a user selector field but the autocomplete is really slow (which is another issue)
