Calendar

Status

1. Tiki's *event calendar* is fairly powerful but it's still a little rough around the edges. It is not seamlessly integrated with the rest of the application.
2. We have a *tools calendar* which is excellent to follow changes in various sections (Site activity monitor)
3. We have a *blog calendar* (go back "using a time machine", show me articles/blogs from date X)
4. Users have a pretty good *private calendar* UserCalendar? (But Tiki's *event calendar* permits a private channel too)

Roadmap

A powerful public/shared/private event calendar using categories and groups. The option to share & subscribe to calendars using calendaring standards and respecting permissions for each calendar "channel". (Tiki needs to become a webcalendar server with login)

Social Networking

Tikifest Workspace and Social Networking **Friday July 31th to Sunday August 9th (10 days long)** in Barcelona, SPAIN.

About

While Tiki has a "friendship" feature, it is so basic, that it is practically "missing". What is missing is proper Social Networking with "transactions" between community members (Ex.: [hospitality exchange network](#), carpooling, dating service, etc) with reputation system. Something like LinkedIn, Facebook or the [www.phpbeer.com](#) project.
