Description

After an issue reported by a user in dev.t.o, and an example produced in the corresponding show.t.o site, I decided to create the corresponding profile to be able to test dynamic items list easily from now onwards in different tiki versions, etc. That's the rationale of this profile:

<https://profiles.tiki.org/Dynamic+items+list>

After I added the sections with data ("Objects in Products Tracker" and "Objects in Service Tracker"), the profile doesn't load any more in the Tiki admin panel for profiles.

And when I added that yaml code in tiki-admin.php?page=profiles&cookietab=3 > "Profile Tester", then I got this error message:

Fatal error: Call to a member function getRequiredProfiles() on a non-object in /var/www/trunk/lib/core/Tiki/Profile.php on line 479

Any tips?

And if I apply only the 2 sections defining the tracker and tracker fields (no sample data), then I get:

An error occurred: Unknown objects are referenced: tiki://local/Test#products, tiki://local/Test#products_name, tiki://local/Test#products, tiki://local/Test#products_name, tiki://local/Test#products_version

After I removed the \$ at the end of the objects defined elsewhere, then I ended up with this error through the Profile tester and only the section with trackers and tracker fields (no tracker data):

Fatal error: Call to a member function getRequiredProfiles() on a non-object in /var/www/xavi-9794-4911/lib/core/Tiki/Profile.php on line 479

Workaround

replacing many

\$profileobject:

with the profile name:

\$Dynamic_items_list_demo:

and fixing one error of a missing variable service_serviceServiceName. (or something like that)
