Description

Following the code mirror upgrade recently in r48260 and despite several repairs by me it seems to be causing problems in several areas:

- ~~CODE plugins no longer do syntax highlighting~~ (sort of fixed but looks messy)
- Plugin popup edit textareas using codemirror (such as CODE) no longer show any text at all (that's the line numbering issue)
- Usable height of codemirror textareas in prefs admin pages such as tiki-admin.php?page=look&cookietab=6 is too short (or box too tall)
- Side by side translation totally messed up (possibly was before)

So should we revert r48260 and go back to codemirror 2.25 (although i have repaired some breakages, might be messy), or somehow fix all these things, or re-mark codemirror as experimental for 12.0 and hope to fix it better later?

Solution

Some issues might have been fixed by Robert P. in r48995.

Can you retest, please?
