Assuming community consensus, (which I don't think will be too hard to get)

I will implement a devtool that will check, and fix these issues and other invisible weirdness. Eventually, it can be integrated into the release or pre-release process. Hopefully by tiki 18.

drsassafras 04 Mar 20 18:33 GMT-0000

The console tool has been in Tiki for a while now, so it should become a part of the release process now. I run it occasionally. It fixes issues, rather than reporting on them, so not sure it's a good CI candidate, but perhaps a modified version would be?

Anyhow, website admins can now set it to run on an interval with scheduler, etc.
