- ⊗ 14.x: Comments can't be posted nor edited when codemirror is switched on (or 'disabled but switchable')

Description
When codemirror is on and its default mode is set to "Off (but switchable)", the end user expects to see a button available in tracker item textareas (like in dev.t.o/t5 bug tracker).

But it's not available still.

To see it reproduced:
Log in here:
http://xavi-9794-5064.show.tikiwiki.org/tiki-index.php?page=Contact_us&itemId=1
u: admin
p: 12345

Codemirror has been set to on (with default theme). If you edit the "Contact_us" page you'll see the content highlighted.
However, no highlighting in the tracker text area field.

Maybe the best option would be to allow the tracker admin to set an option for text areas to include the button to toggle the "highlighter" upon user request (as with text areas in wiki pages).

This way, codemirror could be set to "Disabled but switchable" (default preference in new installs), and each user could decide whether to enalbe highlighting in that text area or not (to prevent side issues in some cases with codemirror on, from happening always in all text areas, etc)

Solution

Maybe the best option would be to allow the tracker admin to set an option for text areas to include the button to toggle the "highlighter" upon user request (as with text areas in wiki pages).

This way, codemirror could be set to "Disabled but switchable" (default preference in new installs), and each user could decide whether to enalbe highlighting in that text area or not (to prevent side issues in some cases with codemirror on, from happening always in all text areas, etc)
