Description

Codemirror: button to switch it on is hidden when first the editor is set to fullscreen

This was working in Tiki9.

To reproduce:

- Set codemirror feature to on, and mode to "Off (but switchable)"
- edit one wiki page with the plain text editor
notice that the button to "switch highlighter" is shown below the textarea. Do not click on it yet.
- click at full screen icon in the toolbar
notice that the button to "switch highlighter" is gone from the textarea surroundings

```
{flash type="url" movie="display683" width="778" height="654"}
```
