Description
    I have a category structure with several levels.

    But if I create a new wiki page and click on the Categories tab, I only see the first level categories. And there is no way to open them up to assign a subcategories. So in effect, you can only assign a Level 1 category to a wiki page.

    Note that I CAN view the > level 1 categories in the Admin > Categories. I just can't assign any of them to a wiki page.

    Note that I am using the Workspace UI feature which does some stuff with namespace of categories. Maybe that's the issue?

    BTW: I upgraded this site to 12x, and it still exhibits the bug:

    http://alpacatechnologies.com/

    So It seems the bug is in 12.x also.

    Dec 23, 2013

    I tried to reproduce the bug on show, but am not able to.

    And even on my site alpacatechnologies.com, it seems the bug only occurs when I am using the Darkroom theme (but on show, it works even with when using Darkroom).

    I'll keep investigating.
