Description

2015-03-10 EDIT: SOLVED! Thx LPH and Gezza.

WikiStructure administration:

The "Save" button is not appearing ...
... and not working

- not if made displayed via "inspect element"
- nor if hardcoded visibility (ex: tiki-edit_structure.php -> button save - > display:none for ajax=n)

Maybe a problem with AJAX in Tiki pre-13 / trunk??

in tiki-edit_structure.php following is not working:

add filtered wikipages to the structure AND SAVE

move pages in the structure to different positions AND SAVE

delete wikipages out of the structure AND SAVE

So all functionality is there, but just "saving" is not possible.

I did not make a show instance here, but please check out <http://dev.tiki.org/item5093>,

where I will document and add more pre-13 related bugs to the show instance:

see the structure

try to alter the structure

Server login: show/show

Tiki login: admin/12345

Workaround

It is possible to add pages via the structure navigation bar on top of the pages.

But be careful: good chances to end up with wrong ordered pages, as pages are mainly added to the end of the structure/substructure and it is not possible to move/promote/demote pages.

Please re-test.

It might have been related to a prior javascript issue. Interface seems to work as expected.

gezza 13 May 14 13:18 GMT-0000

tested on r51261, it looks fine

Torsten Fabricius 10 Mar 15 20:41 GMT-0000

Hello Louis-Philippe and Gezza,

I just today got a reminder by Gezza (thx!) and tested.

In Tiki14 it is definitely working!

Will close the issue then. Thx!
