### Description

Page Alias worked fine in 9.x at least, and probably in newer versions.

But they seem to be broken here on dev.t.o.

To reproduce, visit:

<https://dev.tiki.org/SVNTips>

which is supposed to be an alias of

<https://dev.tiki.org/SVN+Tips>

as you can see in the bottom of the SVN Usage page.

However, tiki replies: "Error: Page not found".

This breaks many links that we have spread all over the globe... to aliased pages to dev.t.o, and eventually, in other tiki12 sites out there....

---

Still present on 06 February, 2014 15:02:50 CET- REV 49772.

### Solution

Translated the aliases on SVN 팁 (total guesswork, but seems to have done the trick)

I'm guessing this was fixed with so I am closing this report. Please re-open if any issues.

#### Workaround

Not actually a bug - there was a translation of the page SVN 팁 using the same aliases.
