Description
  When putting a user in a group that inherits permissions from the Registered group, that group is not visible when trying to share a task with a group.

  1) Create a group that inherits permissions from Registered Group
  2) Assign a user to that group.
  3) Create a new user task
  4) Try to share task with the above group
  5) That group is not visible in the drop down box.

  PS. The group name has Greek characters, I don't know if this is of any importance.

Issue appears to be an issue with task permissions not inheriting properly.

If you change the group to not inherit any permissions, then change the user tasks permission for that group you can now assign tasks to the group. If you change the permission inheritance back then you will retain the ability to assign group tasks.

This is probably why admins can not assign any tasks except to registered users.
