Related-to

- [pluginTracker url parameter does not work](#)

Description

After submitting a tracker item using PluginTracker, the form doesn't show after the page refreshes. This is because of certain url parameters that are added when the page refreshes. For example the url upon refresh can be:

tiki-index.php?page=HomePage&ok=y&i**TRACKER=1**#wikiplugin_tracker1

The parameters in bold above cause the form to not show. If the following lines are commented out in wikiplugin_tracker.php (around line 986 in 12x) then the form will show:

```

} else if (!empty($page)) {
    index.php?page=".urlencode($page);

    $url = "tiki-

    if (!empty($itemId)) {
        $url .= "&itemId=".$itemId;
    }
    $url .= "&ok=y&iTRACKER=$iTRACKER";
    $url .=

    header("Location: $url");
    exit;

```

I set the admin password for the show instance to 12345. See instructions for recreating on the home page of the show instance.

Workaround

Comment out the lines indicated in the description above.
