Description

When you try the Slideshow wikiplugin to customize the appearance of the wiki page Slideshow (background image, font color, etc.), it just flashes for a second and then it is being overwritten by the Slideshow default "theme" (vendor/jquery/jquery-s5/images/bg.png) rendering the plugin kind of useless.

Reproduced here: <http://luci-199-5148.show.tikiwiki.org/>

Just click the Slideshow button on the bottom of the page or go directly to the slideshow:
<http://luci-199-5148.show.tikiwiki.org/tiki-slideshow.php?page=HomePage#>

Solution

Must be fixed in 3rd party <http://code.google.com/p/jquerys5/>

Workaround

To keep the image used as background comment out the line containing "jQuery('img.s5-background').remove();" (which removes the img) in vendor/jquery/jquery-s5/jquery.s5.js.

Must be fixed in 3rd party <http://code.google.com/p/jquerys5/>

Just a note: Appears to be partly working in trunk. The background doesn't appear there though (I suspect !important CSS rule)...
