Description

This was discovered on a Tiki12 upgraded from Tiki9 using wysiwyg, but the issue is also there with no wysiwyg.

I suppose we should first focus on the non-wysiwyg issue and there are chances it will also be solved in wysiwyg. So no more about wysiwyg

First, I remind how things should work, as all is fine in wiki pages

In HomePage, insert

```
{HTML()}<iframe
```

```
src="http://www.musarama.org/en/widget/slideshow/key/269c31354b3770e5e96e8eccb1fec97ced34f0fc0b" width="480" height="300" frameborder="0" webkitAllowFullScreen mozallowfullscreen allowFullScreen></iframe>{HTML}
```

Approve → OK

This works fine as I understand it should, and as it worked in Tiki 9. Meaning there is a nice iframe with images in it.

See: <http://jyhem-9952-5156.show.tikiwiki.org/tiki-index.php>

Second, I show the problem

Create new article and put inside

```
{HTML()}<iframe
```

```
src="http://www.musarama.org/en/widget/slideshow/key/269c31354b3770e5e96e8eccb1fec97ced34f0fc0b" width="480" height="300" frameborder="0" webkitAllowFullScreen mozallowfullscreen allowFullScreen></iframe>{HTML}
```

→ It asks for validation but on viewing, the content of the HTML plugin is wiped!

I see it is wiped by editing the article, and I see the HTML plugin is empty.

I try again, checking "Allow full HTML (Keep any HTML tag.)
If not enabled, Tiki will retain some HTML tags (a, p, pre, img, hr, b, i)." but that seems to be ignored.
In re-editing, it does not even stay checked.
Anyway, that should not be the way to do this. HTML plugin should not require to check *Allow full HTML*.

I attempt to insert my html code outside the HTML plugin but it still gets stripped out, even when checking *Allow full HTML*.

See: http://jyhem-9952-5156.show.tikiwiki.org/tiki-read_article.php?articleId=1

So right now there is no way to insert stuff in articles like they could 😞

Solution

Revision: 50124

<http://sourceforge.net/p/tikiwiki/code/50124>

This seems to have been caused by revision 48131

Jean-Marc Libs 27 Feb 14 14:00 GMT-0000

Not just plugin HTML, but also plugin CODE.

In other words, all plugins which have a legitimate need for containing html code 😞

Compare http://jyhem-9952-5156.show.tikiwiki.org/tiki-read_article.php?articleId=1 (Tiki12)
with

http://jyhem-9952-52.show.tikiwiki.org/tiki-read_article.php?articleId=1 (Tiki9)
