### Description

I have tiki11.1 running on dreamhost. When I tried to upgrade to 12.0, I received the following error on step 5 of the install:

No route found. Please see <http://dev.tiki.org/url+Rewriting+Revamp>

I then created a new database and did a fresh install of 12.0 to the new database. I received the same error message.

I am able to log into the site and the application seems to be working okay. When I go to the Admin home page, I get the following error:

Your database requires an update to match the the Tiki version; use the installer. Using Tiki with an incorrect database version will cause errors. If you have shell (SSH) access, you can also use the following, on the command line, from the root of your Tiki installation: `php installer/shell.php`

Local.php still shows the version at version 11

I am not sure this is relevant but I want to point out that dreamhost uses a separate server for their mysql databases. If I install tiki at <http://tiki.a2host.us>, the database will reside at [mysql.a2host.us](http://mysql.a2host.us).
