Description
    When I export and import Tracker fields, all of the values are works well except some of features.
    That is Permissions value of "Visible by" or "Editable by" in Tracker fields are not exported or
    imported well.

    As I have tested, it does not work in Tiki 11 or 12, and doesn't know the above versions are works
    well or not.

    I have been worked export and import Trackers in production. When I doing this, I have to update
    the permissions values manually every time. It is an tiresome job for me as you may know.

    Is there any other good idea?
    Or is it an excluded feature in Tracker export? If it is, could you enable the feature?

    Thanks,
    Joon
