Description

The maketoc plugin displays multiple TOC's (one from each Language displayed) on the left hand side when the international "all languages" feature is used.

The screenshot displays a side-by-side comparison of two Table of Contents (TOC) for 'Goethe's Theory of Colours'. On the left, the German version 'Zur Farbenlehre' by Johann Wolfgang Goethe is shown, listing sections like 'Translator's Preface', 'Preface to the First Edition of 1810', 'Introduction', and various parts of the theory. On the right, the English version 'Theory of Colours' is shown, with a note indicating 'Translation of this page is incomplete.' The English TOC lists sections like 'Translator's Preface', 'Preface to the First Edition of 1810', 'Introduction', and parts I through V. Below the English TOC, the title 'Goethe's Theory of Colours' is displayed, followed by a translation credit to Charles Lock Eastlake, RA., F.R.S. The German TOC also has a title 'Zur Farbenlehre' and the author 'Johann Wolfgang Goethe'.

The screenshot does not clearly demonstrate the bug to me, who do not understand German, but I am guessing the bug can be seen in the left side's TOC, which should not contain both German "Einleitung" and English "Introduction".

Philippe Cloutier 07 Jun 18 13:40 GMT-0000

This bug probably has the same cause as maketoc adds bogus content to search index, causing false positives, so both should be solved simultaneously. Until Tiki 18, the parser was not contextual. Function `parse_data_process_maketoc` had to store headings in a global `$anch` variable. This could now be solved by changing that from a function variable to a property of the `Parsable` class, if there is no better solution. I suspect this is needed, because if page `Parent` includes page `Child`, we (may) want `Parent`'s TOC to include `Child`'s headings. Nevertheless, fixing this under 30 minutes is optimistic.
