The screenshot does not clearly demonstrate the bug to me, who do not understand German, but I am guessing the bug can be seen in the left side's TOC, which should not contain both German "Einleitung" and English "Introduction".

Philippe Cloutier 07 Jun 18 13:40 GMT-0000

This bug probably has the same cause as maketoc adds bogus content to search index, causing false positives, so both should be solved simultaneously. Until Tiki 18, the parser was not contextual. Function parse_data_process_maketoc had to store headings in a global $anch variable. This could now be solved by changing that from a
function variable to a property of the Parsable class, if there is no better solution. I suspect this is needed, because if page Parent includes page Child, we (may) want Parent's TOC to include Child's headings. Nevertheless, fixing this under 30 minutes is optimistic.
