Description

Hello,

I've been using the plugin FreeTagged with the following options {freetagged type="all" maxRecords="10" h_level="-1" titles_only="n"} on a TikiWiki page

There are some pages (mostly those we're still writing) on our site that should not be accessible by all users . The permissions for these pages seem to be set correctly because a tagged search doesn't list the forbidden pages for restricted access users. However, they do appear in the list generated by plugin FreeTagged.

I think this is a bug because I don't think I can see options to hide the pages on the documentation.

Regards Peter
