Description

The wysiwyg editor no longer shows the defined toolbar (as set in toolbars admin) when editing a wiki page. Instead the reduced wiki syntax toolbar is shown which does not allow all the edit features possible.

Solution

Not actually a problem of the wrong toolbar being used, but a change in which package was being stored by composer.tiki.org.

Hopefully fixed with a new pref in r51954

confirmed that 51954 fixes this issue - so will close this item

This seems to be because composer.tiki.org (which uses satis) has decided that packagist.org has more up to date versions of ckeditor available, so it will use those instead - unfortunately that only has the standard build of the released tags and we need the "full" build because that's where all these toolbar buttons are...

We're working on it 🙄
