Description

Just compare Greek characters (απόσπασμα) on these 2 sites:

<http://tiki.org/forumthread52617>

<http://next.tiki.org/forumthread52617>

I (Marc Laporte) suspect something in the pre-dogfood server upgrade script. Maybe UTF-8 related. See [item5337](#)

Solution

Nelson & Oliver figured it out. See the comments

Comments

Jonny Bradley 16 Jul 14 17:01 GMT-0000

This doesn't seem to have happened on dev.tiki.org or the other next servers (see the chevrons char in between admin and features on <https://next.tiki.org/tiki-admin.php> and compare with <https://nextdoc.tiki.org/tiki-admin.php>)

So maybe this is something caused by the next dogfooding upgrade script on tiki.org? Or an underlying problem with the encoding there?

Nelson Ko 19 Jul 14 16:47 GMT-0000

This problem exists on next.tiki.org. But when I tried to reproduce the problem by upgrading a copy of the tiki.org backup dump I could not reproduce it.

> Could you assist in looking into whether it's a MySQL config issue, or perhaps an issue when the database was copied or something else?

Fixed. [Tiki.org](http://tiki.org) had `adodb` disabled:

```
// $api_tiki = 'adodb';
```

but next.tiki.org had it enabled:

```
$api_tiki = 'adodb';
```

Disabled it for next too, now it displays correctly.
