

Reverting that jq code to no extra indentation fixed the issue.
The apply button is not styled as the rest, but at least nowadays the user is shown just one single submit button in the screen, and in the right section.

Fix committed in r52344

Workaround

r52083 - adding missing divs to make tables look better. Also removing text Step3 (there is no Step 1 and Step 2 anymore).

Page could use some more rework in a later release, code is messy and things are overexplained,

gezza, the regression issue still remains:

- (1) the user is not sent to the right place after clicking to "apply profile" in the profiles wizard.
- (2) moreover, default style doesn't highlight the button to apply the profile
