### Description

When the GALLERIFFIC plugin is used in the WYSIWYG editor (full html) then the editor no longer opens - just the 'Loading' message forever. The plugin seems to run ok once it is in there ie it was there before an upgrade or put in new first time round - and you can also use the standard wiki editor ok.

Console errors shown when trying to load the editor are:

```
"TypeError: imageData is undefined  
var index = imageData.index;
```

```
jquery....ffic.js (line 505)
```

which might have something to do with it

... just to confirm that this is still a bug at r 55993 Aug '15

### Solution

r55996

fixed in r56008
