Odd, this is fine on my localhost - and i've stepped through the query function several times now and i can't see why the page param gets lost on this server... and some other pages work ok, like

<http://dev.tiki.org/tiki-print.php?page=test> or

<http://dev.tiki.org/tiki-print.php?page=Wide+Content+Test> or

<http://dev.tiki.org/tiki-print.php?page=Tiki14> but not ok for

<http://dev.tiki.org/tiki-print.php?page=Tiki13>

Any ideas anyone?

Maybe... yup! (who'd have thought...)
