Description

I go to page [http://dev.tiki.org/SVN+Tips#What\\_revision\\_number\\_am\\_I\\_at\\_What\\_branch\\_am\\_I\\_using\\_](http://dev.tiki.org/SVN+Tips#What_revision_number_am_I_at_What_branch_am_I_using_) and I do the inline edit of the CODE plugin.

I change the *color* parameter (tiny change) and I save the plugin.

Now the page is all messed up. It seems that the wiki page is parsed as if it was html 😞

Solution

Hopefully fixed in [r51970](#) - seems to work but hope it doesn't mess up other edge cases...
