Description

If you have an existing tracker with a large number of items then it does not delete 'in one go'.

What I mean by that is at the admin/list tracker screen using the delete 'action' does not appear to do anything ie the screen does not refresh or do anything.

But if you refresh the page then the number of records has decreased. For my test site a 6000 record tracker only decreased by about 1200 items (I've no idea why this number and of course it might be record size /field type dependent).

It therefore takes 5 goes to actually delete the tracker and even when it is down the large few items you have to refresh the page to see that the tracker has indeed gone from the listing

Not really an excuse but this has been an issue forever - it's not an easy fix as you need to get round the server's various timeouts...

Try r52077? If it works i'll backport it to 12.x
