Description

Image width is set to 600

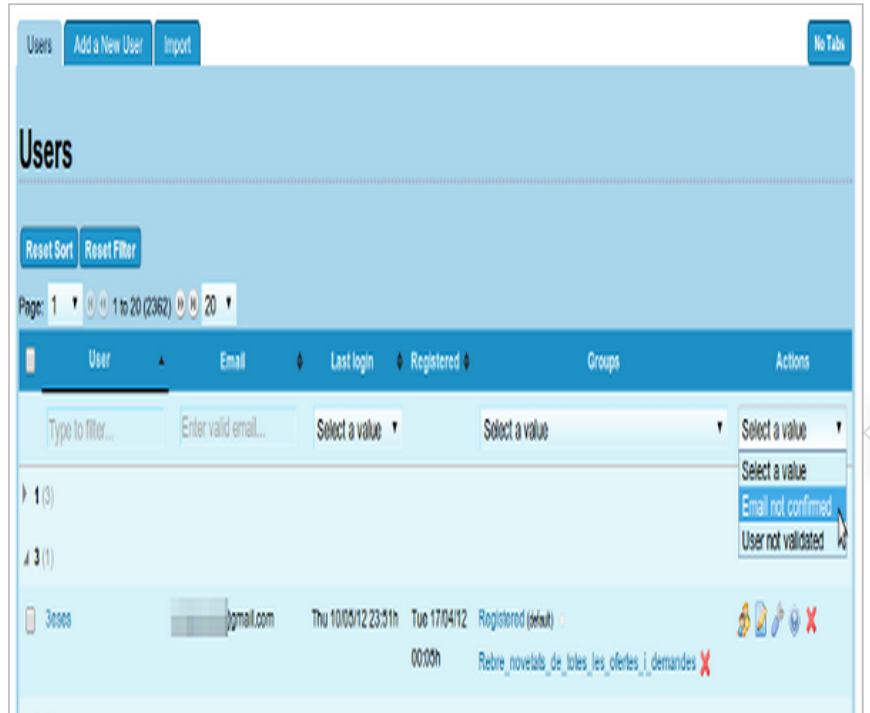

Image height is not set

Thus, it should be proportional, no?

Please see:

## 2. Admin users

You have many more filtering options to select users from the users list. You can filter by a search string in the user email, by the fact that users didn't validate their account, etc. All of them using the jQuery Sortable Tables feature.

This is happening also to any 12x site based on svn.

Regression was introduced by r52064 in 13.x, and its backport to 12.x (r52066)

```
[bp/r52064][FIX] When remote server where image is down, img plugin will try in vain to get image until timeout which causes page not to load
```

Authored by: nkoth 2014-07-22

### Solution

Fixed in r52224/5. But note that if you have any remote images that have only width/height set, they need to be changed to have both set (it is impossible to tell both without opening the image)

Thanks for the detailed bug report.

## Comments

**Marc Laporte** 06 Aug 14 15:26 GMT-0000

<http://doc.tiki.org/Tiki12> looks good again

But this page still has one skewed image: <https://doc.tiki.org/Backup>

The screenshot shows a web browser window with the address bar containing 'doc.tiki.org/Backup'. The page has a green header with 'Documentation' and 'All Tiki Community Site'. Below the header, there is a sidebar on the left with a 'Featured Links' section containing 'Tiki TV', 'Tiki for Smarties', and 'Tiki Essentials'. The main content area displays a database management interface for 'phpMyAdmin'. The interface shows the server as 'localhost' and the database as 'tiki19'. There are navigation buttons for 'Estructura', 'SQL', 'Exportar', 'Cercar', and 'Consulta segons exem'. A table with three columns: 'Taula', 'Acció', and 'Registres' is visible. The table contains three rows: 'aulawiki\_assignment', 'aulawiki\_gradebook', and 'aulawiki\_period'. The 'Registres' column shows '0' for each row. The image of the database interface is skewed to the right.

How can we know how many images are affected? Is a manual correction feasible?

Thanks!
