Description

Profiles wiki handler: translations param doesn't work. To reproduce, see and apply profile: <http://profiles.tiki.org/Consensus+Forums>

This page:

<http://xavi-9794-5371.show.tikiwiki.org/tiki-index.php?page=Instructions+for+the+Consensus+Forums>

should be in the same trnaslation set as the equivalent Spanish one:

<http://xavi-9794-5371.show.tikiwiki.org/tiki-index.php?page=Instrucciones+de+los+Foros+de+Consenso>

This is how the pages are defined in the profile decalaration:

```
objects:  
-  
  type: wiki_page  
  ref: consensus_forums_include  
  data:
```

```
name: Instructions for the Consensus Forums
description: Instructions on how to use forums to help users seek consensus on
discussion threads
lang: en
mode: create_or_update
translations: consensus_forums_es_include
content: wikicontent:Consensus_Forums_Instructions
-
type: wiki_page
ref: consensus_forums_es_include
data:
name: Instrucciones de los Foros de Consenso
description: Instrucciones sobre como users los foros para ayudar a los usuarios
a buscar consensos en cada hilos de debate
lang: es
mode: create_or_update
translations: consensus_forums_include
content: wikicontent:Consensus_Forums_Instrucciones
```

However, the "translations" keyword doesn't seem to take effect.

Solution

It was an issue due to misleading documentation (probably, just outdated, in fact).

Param translations doesn't apparently work with pagenames, but just with [\$pagereference]

See:

https://profiles.tiki.org/tiki-pagehistory.php?page=Wiki+Handler&history_offset=1&diff_style=sidediff&diff_style=sidediff&show_all_versions=y&compare=Compare&newver=38&oldver=37&tra_lang=sq&paginate=on&history_pagesize=25

thanks lph for tips on where to look on a working profile with the usage of page translations.
