Description

This is a mathematical field with (mul importance ease).

When field is edited, value gets calculated, but not on first save. For example, in this bug report, I will put importance & ease values.

This causes an issue on sorting on this page: <http://dev.tiki.org/Tiki13#Open>

As per this image

Options for Mathematical Calculation

Performs a calculation upon saving the item based on other fields within the same item.

Calculation

(mul importance ease)

Calculation in the Rating Language

Re-calculate event

Save

Allow to specify special calculation handling. Selecting indexing is useful for dynamic score fields that will not be displayed.

Validation

This should be run by someone with server access, in case it breaks the indexing.

Marc Laporte 04 Aug 14 22:51 GMT-0000

It's just so annoying that the sorting is wrong. Will give it a shot now. I hope I don't break the site.

Marc Laporte 04 Aug 14 23:01 GMT-0000

...re-index via the web interface timed out (not surprising)

I'll leave it as is. The daily rebuild will hopefully take care of it soon. If rebuild fails, this change is the first to revert / investigate.

Thanks!

Marc Laporte 05 Aug 14 12:25 GMT-0000

So re-index worked last night 11pm EST:

<http://www.timeanddate.com/worldclock/converted.html?iso=20140805T05&p1=48&p2=165>

But <https://dev.tiki.org/Tiki13#Open> is still missing a lot of values in the "Priority" column. Thus, it appears the Re-calculation event at indexing is not working
