InformationDocumentationDevelopment

## Model?

Tiki's strength is its integrated feature set and community dev information.

Tiki is not removing any functionality and will continue to grow Web Application with the most built-in features for a while now change their model or grow much faster than Tiki.

Features that can be done on shared hosting, with the under Framework) will continue to be added. This being said, there Tiki community members need a solution. Tiki Suite will extend

So this is not changing course, this is extending the [Tiki Mode](#)

## What is the license?

It depends on the license of the components. Presumably, the there would be documentation on how to activate but this will sure be an [OSI approved license](#)

I have seen similar weirdness on other sites but have been unable to see the pattern. I suspect a specific condition of having (or not) certain modules in the footer (or something)

#### Solution

there was perspective filter for the footer module which did not include the suite perspective

now there is no perspective filter and the footer is visible again for suite

It was Ok in 12.x though.

Any idea if there could be an issue in the upgrade script? Or perhaps it was just a module manipulation human error.

Thanks!
