Description

[Image of Bytecode Cache]

Bytecode Cache

Using OpCache. These stats affect all PHP applications running on the server.

Memory

- Used: 100% - Available: 0%

Cache

- Hit: 99% - Misses: 1%

Little memory available. Thrashing likely to occur. The values to increase are apc.shm_size (for APC), xcache.size (for XCache) or opcache.memory_consumption (for OPcache).
Amette contributed a way for Tiki to report its health:

This could help
1. Alert quickly the right people to get the site back up
2. Provide data to understand what went wrong

Related:
