Description
If you try and change some settings in the Preferences area of My Tiki e.g making your email public or the checkboxes for what type of content you want to 'track' - then the "Save changes" button does not do anything and the changes are not saved.

Don't know if this is a problem in other screens but I've checked it in FF, Chrome and Safari (for PC) and my own Tiki13 test site as well as the the Tiki Community web site

Solution
fixed in 52326 - missing opening form tag in the .tpl file

Importance
10 high

Priority
50
