### Description

Tracker field descriptions aren't parsed when used out of PluginTracker even if field checkbox is set or that

You can reproduce applying profile "Tracker\_as\_calendar\_12x".

When you attempt to add a new item to the trackercalendar through the fullcalendarresourceviews interface, description of location field is not parsed.

But if you attempt to add through the extra tab in that wiki page, where PluginTracker is being used, that field desc is shown parsed.

### Solution

fixed in r52341 (13.x) and backported in r52342 (12.x)

### Importance

5

### Easy to solve?
