Description
In the RSS module part of Tikiwiki, incoming RSS feeds are incorrectly parsed. Escaped entities (&amp; &apos; &quot; etc.) have to be replaced with the entities themselves when the RSS feed is viewed. However, this is not done. As a result, when a user clicks on the links, the link still has references to (&amp;) which makes it an invalid URL.

The problem is in "parse_rss_data" function of rsslib.php

Solution
Solution is straightforward. "preg_replace" should be used to replace all references to "&amp;" with "&" in links. And all titles and descriptions should be similarly processed and all "&apos;" and "&quot;" .. etc. have to be appropriately fixed.
