Hello Dev Team;

A post for help was made to the Dev email list. It was suggested to make a wish sooooooo:

Would you make it possible to assign category ids during profile assembly using a wiki page template?

More specifically:

1. Using a datachannel; wiki pages, blogs, file galleries, groups and categories are created and referenced in a wiki template with the “wikicontent:template_name” syntax.
2. This has been successfully done for both blogs and file galleries. (see respective code below)

For blogs in a wiki page template:
For file galleries in a wiki page template:
Incorrect param
3. This does not appear to work for categories.

Thanks in advance for your consideration.

Take care,
Robert Rasgorshek

Please reference email to developers: Assigning category id using $profileobject: syntax
