Description

Can not edit Wiki Pages in Tiki 13.0 using Chrome or Netscape. IE10 is working fine.

Details: I upgraded my Server from Tiki 7.0, PHP 5.2, MySql 5.1 to Tiki 13.0, PHP 5.6, MySql 5.5.

I needed to do the Database Upgrade with the console.php. Otherwise tiki-install.php stuck with an error in Perms/Context get_user_xxx:

Then I did choose Unified Search and upgraded and rebuild the index with the console.php.

After this I can edit Wiki pages using the IE10 10.0.20 x32 or x64 Browser just fine!

But Chrome and Netscape Browser on Windows and Linux both x32 and x64 versions are have all the same error: They do not allow to put the cursor into the edit pane and there seems to be something that blocks the mouse and cursor to get to the edit textarea.

Can someone verify this behavior?

Has someone a solution for this?

Now the details of the used browsers:

Working: => Wiki page edit pane is functional and I can edit the content and save it successfull!

- Internet Explorer IE10 Version IE 10.0.9200.17088 x32 Win 8.0 x64
- Internet Explorer IE10 Version IE 10.0.9200.17088 x64 Win 8.0 x64

Failing: => Wiki page edit pane locked. Can not enter or change anything of the content.

- Google Chrome - Version 37.0.2062.124 m (64-bit) Windows 8.0 x64
- Google Chrome - Version 37.0.2062.120 (64-bit) Linux/Debian 7.6 x64
- Mozilla Firefox 32.0.3 x32 Windows 8.0 x64
- Mozilla Firefox 32.0.3 (64-bit) Linux/Debian 7.6 x64

Info: There are no difference if I try to edit a new wiki page or an existing one.

I don't have a problem editing wiki pages with other browsers (I use Firefox and Opera mostly), and haven't seen other reports of this problem. Maybe it's a problem with your site or your page components? I once recently had trouble because a module in the page-bottom module zone was overlapping the wiki edit textarea due to some HTML problem in the module. Removing the module gave me access to the textarea again.
