Description
    We have deployed out TikiWiki on Cloud Azure website and performance is very slow. It's taking about 10 seconds to load the page. We are currently using "Smarty template engine". We are currently using version version 5.5.2 of PHP. We are currently using TikiWiki version 13.0. The application is deployed on IIS Server. We have increased the default PHP memory allocation from 128 to 512 MB. Also we have enabled limited TikiWiki features needed for our usage. Please suggest as what can be done to improve the performance.

Solution
    none

Workaround
    None
