Description

13.x+ (& dev.t.o): wrong bg color in convene plugin in some theme styles

Since 13.x, convene plugin doesn't display properly the background color in some theme styles. It can be seen reproduced in <http://dev.tiki.org/Tiki14>

When using Tiki12, the unconfirmed cells had grey background behind the question mark.

Using fivealive-lite in tiki13, the unconfirmed cells have no grey background but some color related to the theme.

You can have it reproduced applying the "Collaborative Community" profile, and going to the members homepage as registered (or admin) user.

This seems that is defective also in current 12.x. A simple fix seems to be adding this custom css:

```
.convene-unconfirmed { background: none !important; background-color: #F1F1EE !important; }
```

Note that without the !important part, the fix doesn't work.

I wonder if there is a better fix, or if I should commit this fix in 12.x, 13.x and trunk.
Any better fix?

This issue seems to have been around since many months, and no one fixed a better way... and we are affected by this issue in dev.t.o/Tiki14 and any other page that uses the convene plugin since many weeks (months?) ago.

You can play with this issue and other potential fixes, if you want, here:

I think it's best to use existing color classes. The Convene background colors now use the Bootstrap "label" background colors: "Can attend" uses "label-success", "can't attend" uses "label-danger", and

"don't know" uses "label-default". Using these classes ensures that every theme will have appropriate background colors (relative to the theme's color palette). But the color may not be the same for all themes. I don't think it's a good idea to specifically designate colors in situations like this because, especially with light-on-dark themes, they may not look good or match the theme's appearance well. Also, site users can easily understand the meaning of the background colors because the pattern is similar throughout the theme's pages (for actual labels, etc.) and because of the icons used in the Convene display. So in other words, IMHO there isn't a bug with the current arrangement.

The issue seems to be fixed long time ago. Closing. See <https://dev.tiki.org/tiki-pagehistory.php?page=Tiki14&newver=224&oldver=223&preview=223> <- looks good to me.
